

Please join us on **DECEMBER 5th AT 9:00AM** in **Livonia, Michigan**
for the following **SPRINT-HOSTED** event...

REAL-TIME MOBILITY SOLUTIONS FOR REMOTE MONITORING AND CONTROL

You are invited to a Sprint-hosted event dedicated to our customers who have processes or equipment that that they must monitor or control or remotely.

At this event we will demonstrate how you can **empower your office and field staff** with mobile technology. We will be discussing **Best Practices for Deploying Mobile Devices in Challenging Environments** and be discussing everything from how to physically **ruggedize and protect** your mobile devices from dust and moisture as well as how to **securely lock down personnel usage** and provide **end-to-end data security**.

MOBILIZING REAL-TIME PROCESS VISUALIZATION AND CONTROL DASHBOARDS

Regardless of what your organization does, everyone is concerned with **reducing equipment downtime, responding more quickly to problems as they arise, and increasing customer satisfaction**. By delivering **real-time information** to the people who need it most (staff in the field, on the factory floor, supervisors, executives) you empower your staff and yourself with the tools with the data to make swift, informed decisions.

Imagine being able to quickly deploy tablet-based "dashboards" for monitoring and/or controlling industrial equipment such as **pump stations, waste water treatment facilities and lift stations, manufacturing processes, material processing equipment**, and much more! Historically, these kinds of SCADA/HMI systems used to be complex and expensive to implement – but no longer! Please join us for a **LIVE DEMONSTRATION** of Opto22's revolutionary **Groov** product and see how quickly your **existing control systems** can be mobile-device enabled and controlled from virtually anywhere.

See other side for more details about this event...

When: Thursday, December 5, 2013
9:00AM to Noon

Where: Laurel Office Park
17187 N. Laurel Park Drive
Livonia, MI 48152

PLEASE REGISTER/RSVP:

Please join us on **DECEMBER 5th AT 9:00AM** in Livonia, Michigan
for the following **SPRINT-HOSTED** event...

At this event, we will also be discussing...

PAPERLESS FORMS / DATA COLLECTION AUTOMATION

Paper has been used by almost every organization on the planet today... *for centuries.*

Re-examining paper consumption is an incredible opportunity to streamline operations. Beyond **reducing your organization's carbon footprint**, you can also incorporate functionality such as GPS **location tracking**, **image capture**, **barcode scanning**, **electronic signature capture**, push notifications, and **access business data**, such as a parts catalogs and price lists. Data entered into these **electronic forms** can be collected for further reporting and analysis -virtually instantly- allowing key personnel to **react sooner** to changing conditions **without waiting** hours or days for the information to be keyed in from paper forms. On average, customers save up to **75% on cost of paper forms** and achieve **productivity savings of \$3,800 per user.**

What could you do with that kind of savings?

Please join us and your colleagues on **Thursday, December 5th, 2013** as we share ways to **reduce costs**, **simplify operations** and **make staff members more productive.** Our intention is to help you augment the traditional human-machine interfaces (HMIs) by making important **information available at any time and in any location** as well as providing security for mobile devices, applications and their content. Let us show you how you can **keep your data secure** on the device and over the air, with our end-to-end security solutions.

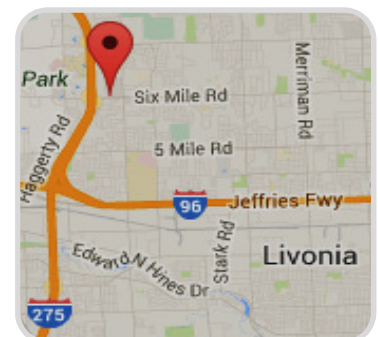

PLEASE REGISTER AT:
